## **Euraplan brings OpenAIR verification**

Pension fund accounting and fund monitoring software house Euraplan has launched OpenAIR Investments, a new system designed to meet the investment monitoring requirements of large pension funds with £750m or more of assets under management.

The product provides pension schemes independent verification of the actions of

their custodians and fund managers, greatly reducing collation and reporting times.

The system, the second module of OpenAIR Accounts, can be used on a standalone or integrated basis, and is suitable for multi-manager externally managed schemes, self-managed schemes and third party administrators. *PF*
